Rahul Malavalli

rahul.malavalli@gmail.com | (858)-218-4533

SELECTED EXPERIENCE

GOOGLE | Software Engineering Intern
June 2020 - September 2020 | Mountain View, CA

- Improved recognition of open app intents in the text-based Google Assistant, including coverage of application name abbreviations, synonyms, and other similar queries.
- Low-latency backend development in C++ with core Google Search infrastructure, being pushed to production.

INSTABASE | Software Engineering Intern
January 2020 - March 2020 | San Francisco, CA

- Completed 3 projects that support client workflows and critical applications.
- Backend feature development in Python, currently in production.

FACEBOOK | Software Engineering Intern
June 2018 - September 2018 | Menlo Park, CA

- Storage/databases team for Messenger Infrastructure.
- Developed internal tool for recovery of content in disaster scenarios.

BUILDUCLA COLLECTIONS LAB | Student Researcher
January 2018 - June 2018 | Los Angeles, CA

- Trained models and developed pipeline to detect annotations/marginalia of interest to researchers in digital copies of old books and manuscripts.
- Implemented Convolutional Neural Networks (CNNs) in PyTorch to perform appropriate object recognition and detection computer vision tasks.
- https://github.com/collectionslab/annotations-computervision

GOOGLE | Software Engineering Intern
June 2017 - September 2017 | Mountain View, CA

- Analyzed Android Instant App memory footprints and visibility, among other factors, to determine causes of instant app crashes in low memory situations.
- Implemented instant app process management system in Java to gracefully manage Android Instant App life cycles and ensure smooth user experience.

SELECTED PROJECTS

ECE239AS FINAL PROJECT | Analysis of VAEs for Reconstructive and Generative Tasks
March 2019

- Development (in PyTorch) and comparison of Autoencoders (AEs) and Variational Autoencoders (VAEs) as generative models on the MNIST and Eigenfaces datasets.

RESEARCH PAPER | Indoor Positioning through Machine Learning on WiFi Fingerprints
February 2017 – September 2017

- Trained machine learning models on ambient WiFi RSSI values to achieve F-measures at and above 0.9 in university and home environments.
- Integrated model into Android application for live training and prediction.
- Paper written with two partners accepted into international conference (IPIN 2017) in WIP division; presented poster at the conference.
- http://www.ipin2017.org/ipinpapers/224/224.pdf
- https://github.com/arjun372/Indoor-WiFi-Localizer

SKILLS

LANGUAGES
Python
Java
C++
C
HTML/JavaScript

PROGRAMMING
Object Oriented Programming
Operating System Development
Machine Learning
Deep Learning
Computer Vision (PyTorch)

EDUCATION

UNIVERSITY OF CALIFORNIA, LOS ANGELES (UCLA)

M.S., Computer Science
Expected Graduation by Dec 2020
Selected Courses:

- Pattern Recognition and ML
- Neural Networks and Deep Learning
- Quantum Programming
- Natural Language Processing
- Reinforcement Learning

B.S., Computer Science and Engineering
Graduated June 2018
Selected Courses:

- Data Structures
- Intro to Algorithms and Complexity
- Operating Systems Principles
- Fundamentals of AI
- Intro to Computer Graphics (in WebGL)
- Entrepreneurship for Engineers
- Introduction to Machine Learning

ADDITIONAL PROJECTS

CS152B - FPGA Depth Perception	Oct. - Dec. 2017
EE3 Project - Arduino Knock Unlock	Apr. - June 2016
LAHacks 2016 - PorFavor	Apr. 2016
Hacketech 2016 - PoliSense	Feb. 2016
Android App - UCLA Dining	Summer 2015
Android Game - Amaze	Summer 2014
